Renewable energy is a rapidly growing industry, with $257 billion invested worldwide in 2012. Renewables have moved beyond niche status to hold a significant and rapidly growing share of energy markets.

This postgraduate course, developed with the Australian National University’s Energy Change Institute, is designed for professionals from public and private sectors with an interest in better understanding the legal framework that applies to and affects the renewable energy industry.

This course explores the rapidly evolving policy, legal and regulatory issues relating to renewable energy projects.

Students will have the opportunity to examine and to critique the legal and policy instruments applied in Australia and internationally to encourage and regulate the sector.

Research exercises and case studies will help to broaden participants’ understanding of the issues.

The course is open to law and non-law graduates in the LLM program, Juris Doctor students, or for professional development.

**Lecturers**
Dr James Prest and guest lecturers

**Cost**
- $1980 for professional development (no assessment)
- $2676 for LLM/JD or non-award students (with assessment)
